

CYBER SECURITY

PCS can assist your organisation to choose the right services and adequately demonstrate good information security practices are adopted & followed when it comes to safeguarding & handling data.

Our Cyber Essentials service audits your IT systems and policies for potential vulnerabilities and works towards achieving the Government backed and Industry supported Cyber Essentials certification for your organisation.

One of our PCS Consultants will analyse and assess your IT structure. Following the analysis your dedicated Consultant will complete a full report and then make recommendations of policies and solutions that will best protect your organisation from a cyber attack.

PCS will then implement the policies around multiple aspects of your IT structure including:

- Access Control
- Administrative Accounts
- User Accounts
- Operations Management
- Technical Vulnerability Scans
- Software Patching
- Malware and Network Intrusion
- Protection between your system and the internet

PCS will provide support both throughout deployment and ongoing to ensure a smooth process with as little disruption to your productivity as possible.

Why Should You Consider Cyber Security?

With the ever growing threats of cyber attacks and stories of cyber security around data breaches hitting the news frequently, its important to ensure that you have protection for your organisation to avoid becoming the next victim of an attack.

From May 2018 a General Data Protection Regulation (GDPR) will be put in place. For every data breach your organisation could be fined as much as 4% of your annual turnover.

PCS hold both ISO27001 and Cyber Essentials Certification so in addition to our IT expertise we can assist your company in ensuring it adopts good cyber security practices and provide additional Managed Services that all strengthen your protection:

- Managed Antivirus/Malware
- Anti Spam
- Hacker Check and 24/7 monitoring
- Managed Encryption
- Remote Tracking and Data Security
- Cloud Backup
- Business Continuity Services

At PCS we can assist you with gaining a Cyber Essentials Certification for your organisation.

It's simple, we will manage the application process for you. This is all included as part of our Cyber Security Managed Service. To maintain this Government backed Industry Supported certification you simply need to complete an annual renewal & audit.

Completing this simple process will allow you to give evidence of good working practices when it comes to GDPR compliance.

Cert No. 13441
ISO 27001

If Cyber Security sounds like something your organisation would benefit from please contact PCS for a no obligation discussion.
